Note Down!!!

REGISTER

off

SALE

Register as soon as possible otherwise the teams will be filled then you cannot participate hurry up guyss

Give me A Pen

register now otherwise you will miss this offer

Why Bad Design ?

- Cluttered text: Overloaded with phrases like “Don’t miss this sale !!!” and “woww !!!!”.
- No logical grouping: Information is scattered, making it hard to process.
- Repetition: Multiple “register now” messages dilute impact.
- Random elements: Irrelevant text (“Give me A Pen”, “Lets GO !!?”) distracts users.
- Poor readability: Inconsistent fonts, spacing, and tone confuse the reader.
- Cognitive overload: Too many competing messages overwhelm memory.
- Lack of hierarchy: Important details don’t stand out from the noise.
- Unprofessional tone: Excessive exclamation marks and casual phrasing reduce credibility.
- No clear action path: Users don’t know what to focus on or do next.
- Low recall value: Random and scattered design makes it hard to remember key details.

venue : Idea factory
REC Chennai

Why Good Design ?

- Organized layout: Information is grouped logically (event name, prize, date, venue).
- Chunking applied: Related details are presented together, aiding memory recall.
- Clear hierarchy: Headings (“QUIZOCALYPSE 2026”) and calls to action (“REGISTER NOW”) stand out.
- Concise messaging: Only essential details are included, reducing cognitive load.
- Professional tone: Creates trust and credibility with the audience.
- Memorable visuals: Simple design makes the event name and prize pool easy to remember.
- Consistency: Fonts, spacing, and style are uniform, improving readability.
- Focus on action: The registration call is clear and unambiguous.
- Minimal distractions: No irrelevant or random text cluttering the design.
- User-friendly: Helps users quickly grasp what, when, and where without confusion.

THANK YOU
